TECHNICAL PROJECTS

Roguelike Deck builder Game (Godot), Senior Capstone

Sept 2025 – Present

- Built a roguelike deckbuilder game in Godot with modular gameplay systems for card effects, deck management, and encounter progression.
- Designed AI decision logic for card selection and enemy strategy to create dynamic gameplay behavior
- Modeled gameplay flow as a graph structure to support procedural generation and difficulty scaling.
- Collaborated with cross-functional team using Agile/Scrum practices, including sprint planning, standups, and task tracking through Jira.

AES Encryption, Cybersecurity

February 2025

- Implemented AES encryption and decryption system from scratch using C++.
- Designed and coded the SubBytes, Shiftrows and AddRoundKey transformations.
- System encrypts 128-bit blocks using an ECB-style mode for demonstration purposes.
- High praise from professor "If I could pay you 1 million bucks I would" highlighting excellence in implementation.

EXPERIENCE

Sales Associate

Nordstrom

October 2023-September 2025

(Seattle, WA)

- Generated 200k in sales first year of employment
- Assisted Nordstrom customers by selecting, searching, and selling them high-quality and well-fitting shoes, generating additional revenue for the company.
- Stocked, tracked, and managed my shoe aisles and ensured that they were well-kept, thus improving search time when looking for shoes.
- Provided quality customer service, which positively affected the company's image.

Crew Boss

United Landscaping & Tree Service

June 2022-August 2023

(Belfair, WA)

- Led a team of 3-5 crewmen.
- Prioritized safety as tree services always involved calculated tree rigging.
- Learned leadership, encouraged teamwork, and built patience.
